< Course Overview />

Over the next 12 classes we will:

- Learn some Developer Basics (Python, Git)
- Define what are Large Language Models (LLMs)?
- Peak under the hood at how Large Language Models work
- You will learn to build with AI & Demo to each other!
- Multi-Modal AI: Audio & Image Generation
- Hear from Industry Members

Let’s take a ride through history

What defines Intelligence?

Hear from the Godfather of LLMs: Ilya Sutskever

AGI- Artificial General Intelligence

Our mission is to ensure that artificial general intelligence—AI systems that are generally smarter than humans—benefits all of humanity.

If AGI is successfully created, this technology could help us elevate humanity by increasing abundance, turbocharging the global economy, and aiding in the discovery of new scientific knowledge that changes the limits of possibility.

AGI has the potential to give everyone incredible new capabilities; we can imagine a world where all of us have access to help with almost any cognitive task, providing a great force multiplier for human ingenuity and creativity.
